Introduction

CQ Technologies is a global IT Solutions business founded in 2013.

Our services include: **Virtual Dedicated Employees, Hourly or Fixed Price Projects** that may involve: Web Development, Mobile Application Development, Desktop Application Development, Server Side Custom Application Development and Graphic Designing.

We mostly follow **Agile development methodology**, being in constant contact with customer and local team with daily team collaboration in scrum.

We do the followings to ensure quality:

- **Understand requirements** – We have **dedicated project managers**. We believe that understanding the right requirements and sometimes giving better suggestions is the most crucial part
- **Create proper timelines** - Graphical and textual data of proper hourly based timelines for determined deliverables
- **Give updates on progress** - Daily or twice a week development updates to clients
- **Agile based team collaboration** - Proper project manager and team leads. Daily scrum meetings and role assignments. All should know what's happening and what's their role.
- **Quality assurance** - Separate dedicated quality assurance team to check for bugs, after core development is completed.
- **24/7 support** - Full and friendly support via email and phone

We offer senior and skilled staffs (with 5+ years of experience and with proper project managers) that can eliminate budget issues while work efficient at the same time!

1. **\$15 to \$25 / hour** rates.
2. Having **quality, professionalism** and industry **best practices** with **low rates** as a **specialty**.
3. **Limited time offer: Pay us only after satisfaction** on completion of a small phase so you won't have anything at risk!

Try us for a minimum viable product and see for yourself...

See what Brock Poling (director client relations) has to say about it and how we achieved it by having a blend of eastern and western employees while optimizing tax, cost of living and other overheads in this **introduction video**

How do we maintain quality and trust, still with low rates?

Usually low rates are connected to low quality; it's a fact in most cases, but not always.

As our developers are outsourced from a blend of eastern and western countries where tax rates and cost of living is not so high as compared to a single country like US or UK for example, we are able to get good skills at low cost. So we charge lesser to our clients likewise.

To maintain quality and communication, as addressed above, we always have the most skilled project managers in the middle to ensure that. The client is always hassle-free

How we are more efficient?

1. We provide proper and detailed **statement of work (SOW document)** to clients before starting any work, so that each stakeholder gets on the same page and know exactly what's going to be developed. This document would include a business overview of project, project usability flow and components, technical information and/or wireframes, hours, work breakdown structure, cost, deadlines, payment options and installments etc. sample statement of work at <http://cqtechnologies.com/sow.pdf>
2. We use **modern tools** like **Redmine/Jira, Lean** and proper **timeline** tools like planner or MS Visio to manage projects as well as give status to clients.
3. We keep in constant contact and **keep the client updated** with team/project status on twice a week or on daily basis.
4. We have **dedicated project managers** who are **skilled technically** as well in **English communication skills**. Project managers handle the project, client requirements and the team all the time. This approach keeps the end client hassle free.
5. We follow **agile** project management most of the time focusing **on industry best practices**.
6. We have an internal **Quality Assurance team** to ensure fewer or not bugs in final deliverables.
7. We offer **24/7 support** *
